Cover

A tokamak reactor ridiculed as a big unless fellow. Many years have passed for seeking a marketable tokamak reactor (at most as twice weight as PWR) being in harmony with a technological feasibility (i.e., it's possible to work out the R&D program). VECTOR stands for VEry Compact TOkamak Reactor, named with all our prayer. (p.944, [Can We Obtain the Realistic Power Reactor in the ST Approach?], Japan Atomic Energy Research Institute, Satoshi Nishio, *et.al.*)
