

JOURNAL OF PLASMA AND FUSION RESEARCH

The Journal of the Japan Society of Plasma Science and Nuclear Fusion Research

Vol. 95, No. 8, August 2019

Special Topic Articles

Common Issue and the New Research for DEMO-Fusion Divertor and Advanced Accelerator Components	
1. Introduction	NOTO Hiroyuki 363
2. Tungsten Material as Target and Shielding for High-Power Proton Accelerator	MAKIMURA Shunsuke, KURISHITA Hiroaki, HARADA Masahide, KAWAMURA Naritoshi, MATOBA Shiro, MIHARA Satoshi, MAKI Muneyoshi, NIKURA Kouichi, JUNG Hun-Chea, NAGASAWA Yutaka and ONOI Masahiro 365
3. Development of Oxide Dispersion Strengthened (ODS) Copper for the Divertor of Nuclear Fusion Reactors	OONO-HORI Naoko, AHGAMIRI S.M.S., UKAI Shigeharu, KASADA Ryuta, NOTO Hiroyuki, HISHINUMA Yoshimitsu and MUROGA Takeo 370
4. Bonding Technology between Dissimilar Materials Such as Tungsten and Copper	BENOKI Hideo 374
5. Conclusion	NOTO Hiroyuki 377

Lecture Note

Explore the Frontier of High Energy Density Plasma Science with Picosecond Relativistic Laser	
5. Stochastic Electron Acceleration in Interaction of Foil Plasma with Picosecond Relativistic Laser	IWATA Natsumi 379
6. Conclusion	SENTOKU Yasuhiko 385

Front Runner

Entropy of Waves	KAWAMORI Eiichirou 387
------------------------	------------------------

Project Review

Plasma Turbulence Observatory (PLATO) for Puzzling out the Principles of Structural Formation and Functional Expression in Turbulent Plasma		FUJISAWA Akihideo, INAGAKI Shigeru, IDO Takeshi and IIO Shunji 391
---	--	--

Saloon

Round Table Discussions by Industry and Young Generation toward Fusion DEMO		KONDO Masatoshi, KAWABE Kenichi, OOISHI Keiji, KOBAYASHI Daichi, MUNESHIKA Koyo, KAWANO Nanako, KOKAMI Takayuki, MIZUTANI Takumi, NOMOTO Kazuhiro and KIDO Shuichi 398

Cover

Observation of ~ 20 Hz plasma oscillation obtained by images of soft x-ray emissivity from plasma. The images were taken from a tangentially viewing soft x-ray imaging system on the QUEST tokamak with time resolution of 1 ms. The plasma oscillation reached outmost position of second fundamental resonance layer of 8.2 GHz electron cyclotron wave. The radial velocity of oscillation is about 18 m/s forward and 40 m/s backward, which is in the order of current relaxation time. (Canbin HUANG *et al.*, Plasma and Fusion Research, Vol. 14, 1402128 (2019) <http://www.jspf.or.jp/>)
