

JOURNAL OF PLASMA AND FUSION RESEARCH

The Journal of the Japan Society of Plasma Science and Nuclear Fusion Research

Vol. 96, No. 6, June 2020

Commentary

- The Progress on the Plasma Research for EUV Light Source for Next Generation Semiconductor Lithography
..... SASAKI Akira 283

Lecture Note

- Introduction to Random Numbers for Simulations
1. Introduction USAMI Shunsuke 290
2. Random Number Generation SATAKE Shinsuke and KANNO Ryutaro 292

Lecture Note

- How to Start Tritium Experiments
1. Engineering and Scientific Applications of Tritium –Present and Future– HATANO Yuji 300
2. Important Points in Safe Handling of Tritium Compounds.
Characteristics of Tritium in View from Hydrogen Isotopes or Radio Isotopes HARA Masanori 305

Project Review

- Bilateral Collaboration Research in National Institute for Fusion Science Collaborative Research
on Electron Cyclotron Heating and Current Drive with 28 GHz High-Power Gyrotron
in the QUEST Spherical Tokamak IDEI Hiroshi, ONCHI Takumi, ZUSHI Hideki,
HANADA Kazuaki, SATO Kohnosuke, KARIYA Tsuyoshi, IMAI Tsuyoshi,
NAKASHIMA Yousuke, SAKAMOTO Mizuki, KUBO Shin and TSUJIMURA Toru 309

Announcement 321

Cover

Tomography observation of the magnetic field dependence of PANTA Ar plasma emission properties. Clear changes are found in the plasma properties around a magnetic field strength (~ 600 G). (a) The total emission with the effective radial extent, and (b) the emission radial profile (symmetric part). (c) The spectra, and (d) the spatial patterns of the fluctuations. The dominant azimuthal mode number changes from $m=0$ to the harmonics of $m=1$. (Issei MARUI *et al.*, Plasma and Fusion Research, Vol. 15, 1201018 (2020) <http://www.jspf.or.jp/>)
