

JOURNAL OF PLASMA AND FUSION RESEARCH

The Journal of the Japan Society of Plasma Science and Nuclear Fusion Research
Vol. 92, No.1, January 2016

Prologue	KOMORI Akio	1
Commentary		
Progress of the Dust Research toward the Fusion Plasma Operation	MASUZAKI Suguru	2
Special Topic Articles		
Tritium Separation and Enrichment Technology		
1. Introduction	YAMAMOTO Ichiro	14
2. Hydrogen Isotope Separation by Gas Adsorption Processes	KOTOH Kenji	15
3. Hydrogen Isotope Separation by Cryogenic Distillation	YAMANISHI Toshihiko	21
4. Electrolytic Enrichment Technique of Tritium in Water for Environmental Analysis	KAKIUCHI Hideki	26
5. Hydrogen Isotope Separation by Water-Hydrogen Chemical Exchange	SUGIYAMA Takahiko	31
6. Recovery of Tritium from Contaminated Water by H ₂ /H ₂ O Exchange Process with Electrolyzer	TAKESHITA Kenji, TAKAHASHI Hideharu and INABA Yusuke	39
7. Concluding Remarks	YAMAMOTO Ichiro	45
Information		48
Plasma & Fusion Calendar		54
Announcement		55

Cover

A two-color pyrometer was developed for measuring a material temperature during an ELM-like plasma irradiation to tungsten (W) materials. The schematic shows a sample holder for the pyrometer measurements during the plasma irradiation on a magnetized coaxial plasma gun device (University of Hyogo). To suppress influence the measurement caused by emissions from the plasma and impurities, back-surface temperature of the thin W material (50 μm) was measured with 5 μs time resolution. (Ikko SAKUMA *et al.*, Plasma and Fusion Research Vol. 10, 1205089 (2015) <http://www.jspf.or.jp/PFR/>)
